WARNING
 Proper maintenance and handling procedures are critical. Always follow installation instructions and maintain proper lubrication.
 Never spin a bearing with compressed air. The rollers may be forcefully expelled.

seal detail F-F

To assemble and adjust the setting of this hub:

NOTE: CLEAN THREAD BEFORE ASSEMBLING USING 1 1/2 UNF DIE NUT

Step 1: Fit seal #4 to seal ring #5 using Loctite 480, allow to dry before proceeding.

Step 2: Place bearing #1 in hub before installing seal ring #6

Step 3: Fit the seal and seal ring to axle, ensure this does not rotate on axle, use loctite 680 if required.

Step 4: Fit the hub to the axle.

Step 5: Tighten the nut while turning the hub. When there is a tight bind on the bearing, the parts are seated correctly, approx 150ft/lbs.

Step 6: Back the nut off 1/6 to 1/4 of a turn or sufficiently to allow .005mm to .02mm end play.

Note: Failure to back off adjusting nut could cause bearing to run hot and fail.

Step 7: Insert the cotter pin as shown, trim the straight leg, bend the other over the axle end.

Step 8: Fit the cap using Flange Sealant on the faces, and tighten the 4 M6 cap screws 16nm (12ft/lbs).

Step 9: Grease with a grease gun using CASTROL BTX or similar until grease is visible through rear seal.
